LENGTH OF STAY

The data period for this measure is 01/04/2017 to 31/03/2018

This measure provides a guide to the typical length of time you will spend in hospital for a specific procedure. Some procedures may be shown as a day case - this means that you are unlikely to stay in hospital overnight.

The length of stay for a given procedure will vary for a number of reasons, including your medical history or simply the time of day the surgery is scheduled. It is important that your stay is right for you. If you have queries or concerns, you should discuss this with your consultant during your consultation.

Is your local hospital on PHIN's website?

Jonathan Evans | 31/08/2017

All hospitals providing private care should be available on our website. However, you may not be able to find your local hospital in our search.

This is most likely because they have not yet submitted sufficient data to allow us to publish their performance measures. However, it could also mean the hospital has not begun submitting any data, and are now subject to action from the UK Government's Competition and Markets Authority (CMA) to ensure they submit data.

Check the status of your local hospital using our interactive map below. Filter by country or region, or search the hospital name and click the hospital on the map to see their status.

INITIAL CONSULTATION

Fees for consultations may be charged as a range to reflect the variation in duration, complexity and individual patient's needs. Additional fees may be charged for diagnostic tests, for example blood tests or radiology. The reason why these tests are being requested and the likely cost should be provided in the letters that you receive from your consultant. Any other charges that may apply, for example cancellation fees and other terms, should be explained to you before your appointment.

Hospital	Initial Consultation
Hospital of St John & St Elizabeth	£280
The Wellington Hospital	£300
University College Hospital	£250

We're getting great support from specialist associations

There may be problems with healthcare data, but it is the future.
Data transparency is the way forward.

Professor Antony Narula, Consultant ENT Surgeon

Transparency isn't an ambition, it's a reality that will drive consistency in PROMs and quality of care for patients.

Professor Carl Philpott - Honorary Consultant Rhinologist and ENT Surgeon, James Paget University Hospital, and Spire Norwich Hospital.

The Acute Data Alignment Programme (ADAPt)

The Acute Data Alignment Programme (ADAPt)

One standard and one system for collecting data and measuring quality for all care delivered in England, whoever pays or provides.

ADAPt has broad support and input

Improvement

G I R F T
GETTING IT RIGHT FIRST TIME

 **PHIN**

ADAPt – initial phases

Phase 1

- > Co-operation, planning and consultation

Phase 2

- > Alignment of data flow, processing and analysis

Phase 3

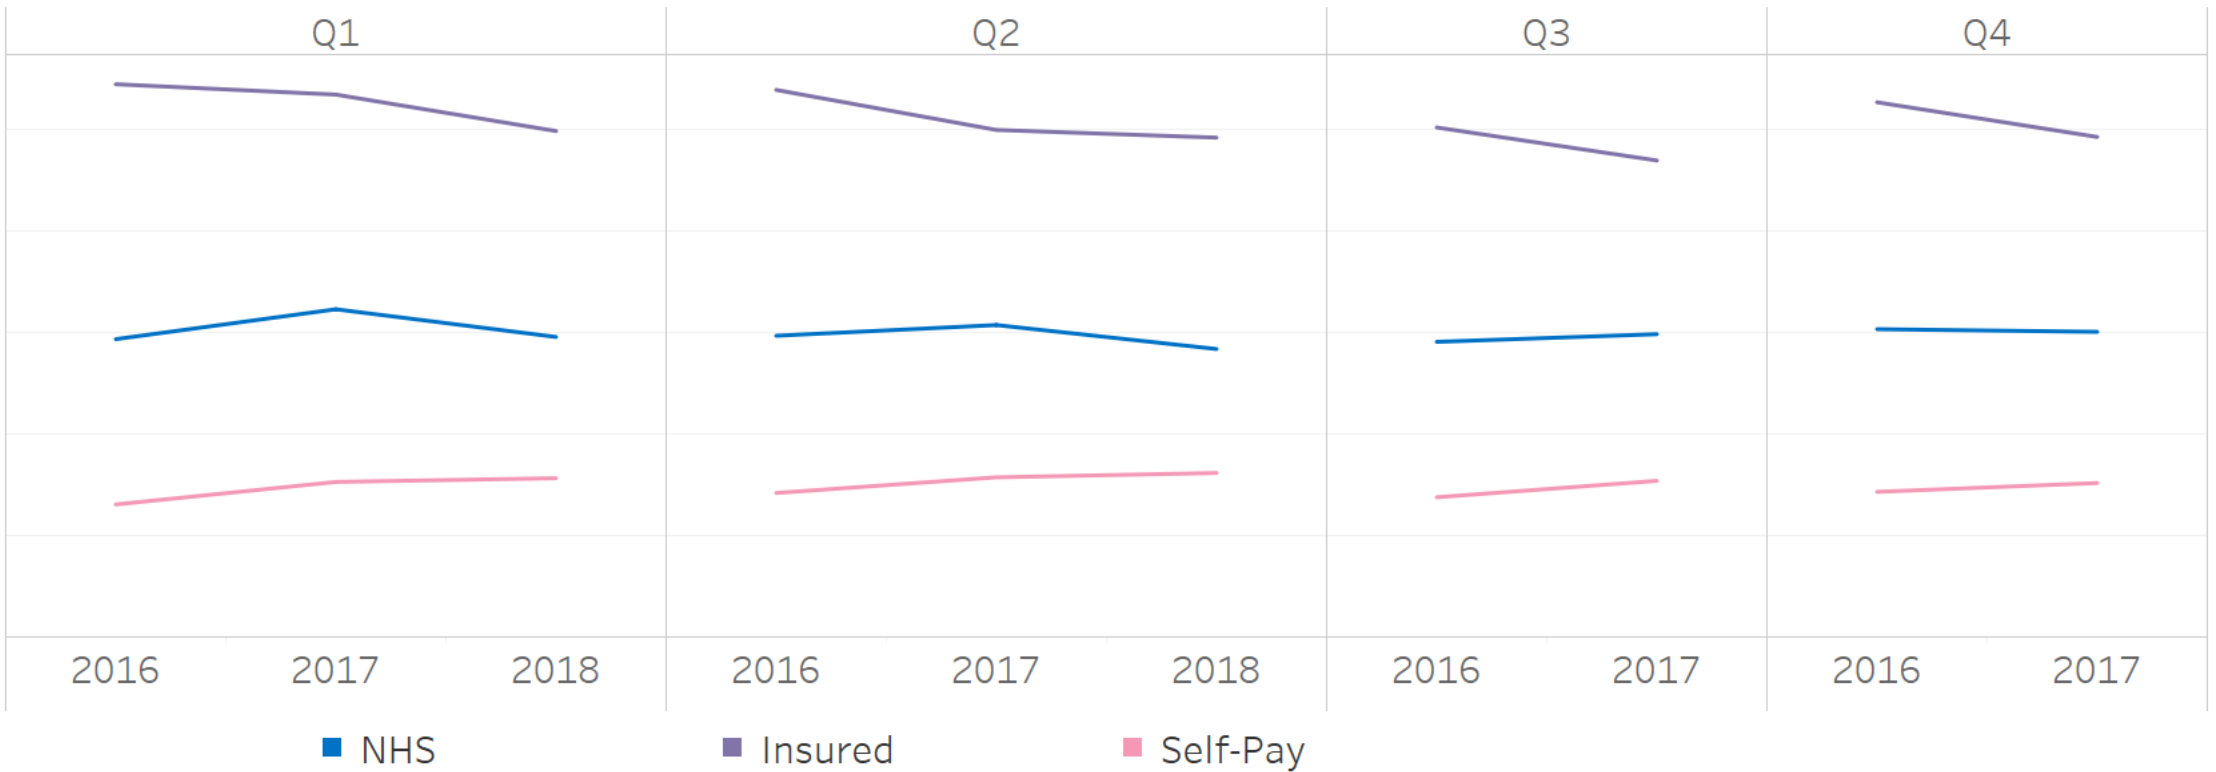

- > Alignment of outputs: integrated information

Releasing value from PHIN's information

Rate of YoY fall in insured activity slowed in Q2

Purchaser trends YoY by quarter

Releasing value from the information that PHIN holds

- How can we make best use of PHIN's data? e.g.
 - Publish facts and figures on private healthcare
 - Provide informatics for members
 - Produce information for GPs
 - ...
- What else might be useful?
- Discussion is needed!

Thank you for listening.
